JACOBSEN® CLASSIC XP™ REELS

EXPERIENCE THE ADVANCED RELIEF TECHNOLOGY DIFFERENCE.

- ✓ Improved Angles
- ✓ Increased Durability
- ✓ Tighter Tolerance

45° Relief Angle: Users get up to 3 times more spin grinds with this aggressive new blade design.

Dark spots on the aftermarket blade indicate overheating during the grinding process. With overheating, the metal is prone to "flake off," resulting in early failure. Advanced Relief Technology™ prevents overheating, which extends blade life.

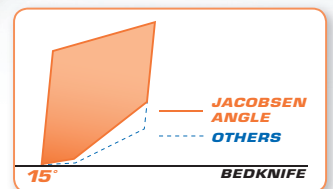

Each blade is individually ground for better process control and consistency in quality of cut.

High quality of cut is maintained for longer periods of time due to superior run-out.

Advanced Relief Technology™ will backlap faster and cause less wear to the cutting system.

15° Face Angle: Eliminates the need for grinding before installation. This new angle also allows the reel blade to stay sharp significantly longer.

Jacobsen reels are flat to the bedknife to less than .001 inch.

For more information about Jacobsen reels, call 1-800-330-8874 or visit www.golfventuresonline.com
